Re : Finance Transformation & Center of Excellence Director

Deploying a Group Core Model across O2C, P2P, F2S and R2R while running a centralized SAP ECC and S/4HANA transition is a governance problem as much as a systems one: every local exception has to be resolved against a single standard, fast enough to keep the CFO's transformation agenda on track.

That's the kind of constraint I've worked under for 25 years in insurance and finance. At CNP, I rebuilt the investment accounting production chain under Solvency II constraints, 350bn€ of assets under management, delivered in 18 months, on time, with harmonized accounting schemes across entities that had been running on divergent local logic. On migration programs, I've written the cahiers des charges, led UAT, and built the OD structures in VBA to move general ledger interfaces without breaking closing cycles, exactly the discipline a centralized ERP rollout demands from business requirements to system alignment. I've also taken systems like SimCorp Dimension and Clearwater Analytics from design through to production, working across Finance, IT and Data teams to get governance and reporting frameworks actually adopted, not just documented.

I haven't led a SAP ECC to S/4HANA transition specifically; my systems depth is on SimCorp and Clearwater rather than SAP.

Worth a call to see where the fit is real and where it isn't.
