As a senior consultant with 25 years in finance and insurance, I bring the exact mix SimCorp needs for this role: deep technical knowledge of derivatives and collateral systems, proven PMO discipline, and the ability to navigate complex stakeholder landscapes while delivering outcomes.

I've spent the last decade designing and implementing transformations at the intersection of business requirements, regulatory constraints, and technical delivery—precisely where this Value Stream lead role sits. Most recently, I helped a major insurance group redesign their derivatives reporting and collateral management processes, cutting reconciliation cycles by 40% while embedding new governance standards. I've led teams through similar horizontal delivery transitions, moving from siloed project delivery to outcome-aligned value teams.

What makes me effective here: I don't separate "business" from "technical." I configure and code solutions myself, which means I can architect with both client success and engineering realities in mind. I've standardized processes across large organizations and mentored teams through transformation without losing momentum on active projects. My background spans regulatory reporting, CFO office operations, and complex system implementations—all relevant to Derivatives/Collateral at scale.

The practical gap: I'm currently independent (Expert Zone Advisory SAS). I've worked remote across Europe and time zones; Warsaw-based delivery isn't a constraint. If your timeline favors a full-time hire or needs a specific CDI commitment before we talk, that's a real conversation. But if you need someone to step in immediately and drive this Value Team toward standardization and client outcomes, I'm ready now.

Let's talk specifics. I'm at xro@xavier-robitaille.com or +33 6 64 89 09 43.
