Re : Senior Accountant F/M - Insurance - LU878093

Luxembourg's insurance regulatory framework, with the CAA and Solvency II reporting sitting alongside statutory closings, is exactly the kind of technical density that made me build a career around insurance finance and nothing else.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That work sits directly on top of the Solvency II reporting this role needs to support. At Coface, I rolled out IFRS 9 in stages over four years, from successive POCs through ECL methodology, accounting schemes, and UAT, coordinating with the depositary CACEIS throughout, and I built a Data Warehouse for investments there, covering field definitions, table structure, and input/output controls. Both mandates required the same discipline this position calls for: closing cycles that hold up under regulatory scrutiny, and reconciliations that don't leave gaps for audit to find later. I completed the full examination track of the Centre d'Études Actuarielles in 2004, which gives me a working fluency with the Actuarial team's language that most accountants don't have.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period, and freelance arrangements work equally well for me if that better suits the timeline you're working against. Hybrid setups are a normal part of how I work: my most recent engagement at Clearwater ran across several countries with monthly senior sponsor committees and milestones tracked on a shared platform, so distributed teams and remote coordination don't require any adjustment on my end.

I would be happy to discuss how this experience applies to your Finance department's expansion.

Best regards,

Xavier Robitaille
