Re : Valuation Actuaries, Life & Health

Reporting Life & Health reserves consistently across local legal entities, PartnerRe group standards, and Covéa group requirements, while keeping quarterly close on schedule, is the kind of multi-standard reconciliation work that breaks teams without disciplined process design.

At CNP Assurances, I rebuilt the investment accounting production line under Solvency II constraints, covering EUR 350 billion in assets, delivered in 18 months, on time. That work meant running parallel reporting across French GAAP, IFRS, and Solvency II, the same multi-framework discipline this role needs across local, group, and Covéa reporting. I've also worked directly with technical provisioning, IBNR, BEL, STEC, PFGS, and with IFRS 17 and IFRS 9 implementation, including ECL methodology and amortized cost categorization, which gives me a working grasp of the accounting logic behind reserve movements, not just the output numbers. On migration and closing, I've built VBA-based accounting entry generation and led UAT for accounting interface cutovers, work that sits close to the model and process maintenance this position covers. My last engagement, at Clearwater Analytics, ran fully hybrid, so distributed teamwork across time zones and remote collaboration tools are part of my daily practice already.

I hold an actuarial qualification from the Centre d'Études Actuarielles (2004) rather than a full professional actuary designation, and I haven't modeled in AXIS or R.

Happy to walk through how this maps onto your quarterly close calendar, are you free for a call this week?

Xavier Robitaille
