Re : Sr. Subject Matter Expert - Analytics & Reporting

Clearwater's Global Delivery division onboards every new client onto the platform, and this role sits at the center of that work: Solvency II reporting, derivatives and alternatives, and the aggregate-reconcile-report model applied across complex implementations. The need is for someone who can own domain expertise end to end, from client requirements through to scalable onboarding processes.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That work covered the same investment accounting and regulatory reporting logic this role requires, at a scale that tested every assumption in the data model.

At Coface, I rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, coordination with the depository CACEIS. I also built a Data Warehouse for investments there, defining the fields, table structure, and input/output controls, which is the kind of structured data work that makes onboarding repeatable rather than bespoke each time.

As senior programme director at Clearwater, I ran several parallel implementations of an R to R SaaS solution, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones, and resources on Monday.com, including the Luxempart engagement in Luxembourg. That experience sits directly inside the Clearwater Way methodology this role is built around, and it gives me a working view of both the client side and the delivery side of the same onboarding model.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this background applies to the Solvency II and derivatives workstreams your Global Delivery team is scaling.

Best regards,

Xavier Robitaille
