Re : Principal Business Consultant - Front Office

SimCorp Dimension® sits at the center of investment reporting for insurers and asset managers across Europe, and Solvency II reporting, including ORSA, is exactly where I've spent the last stretch of my career living inside that system.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That covered portfolio management data, valuation flows and the regulatory reporting chain end to end, working directly with front office, middle office and actuarial teams to get the configuration right across multiple modules.

Before that, at Coface, I rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, coordination with the depositary CACEIS. I also built the investments Data Warehouse there, defining fields, table structure and input/output controls, which is the same kind of deep, technical process modelling this role calls for. Four years at SCOR, including two as chief transformation officer of the investment function, and earlier reinsurance work across AXA entities and run-off books, added the regulatory and risk management layer that sits alongside portfolio and instrument valuation topics in the SimCorp Dimension scope.

I completed the full examination track of the Centre d'Études Actuarielles in 2004, which gives me the technical grounding this role needs on the actuarial and provisioning side, and I've built and run project teams of 10 to 15 people throughout, including a 20-person business unit at Primexis. English and French are both working languages for me daily.

I operate as an independent consultant today. That said, a permanent role in Paris is entirely something I'd consider, either directly or after an initial engagement period, given the scope and the client base this position gives access to.

I would be happy to discuss how this experience maps to the Investments team's current implementation priorities.

Best regards,

Xavier Robitaille
