Re : Fund Controller

Neuberger's AIFM platform is adding products across ELTIF and evergreen structures with monthly NAV cycles, and that growth puts real pressure on fund accounting, valuation and regulatory submissions staying on time while new strategies onboard. That combination, structuring plus control plus reporting discipline, is where I've spent most of my career.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That work sat exactly at the intersection this role occupies: investment accounting, valuation inputs, and regulatory output under tight deadlines.

At Coface, I built a Data Warehouse for investments (fields, table structure, input and output controls) and rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemas, UAT, and coordination with the depositary, CACEIS. That depositary coordination maps directly onto the service provider oversight this role calls for, fund administrator, valuator, auditors, tax.

More recently, as senior programme director at Clearwater, I ran several parallel implementations of a R to R SaaS solution, with monthly sponsor committees at senior management level and consolidated tracking of deliverables, milestones and resources on a dedicated platform (Monday.com), including a Luxembourg client, Luxempart. That mission was run fully remote, across time zones and stakeholders, which is how I work day to day and fits a Luxembourg-based role with distributed service providers.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this background applies to the new fund launches on your platform.

Best regards,

Xavier Robitaille
