Re : Senior Product Manager I - International Accounting

Refining an investment accounting and regulatory product across EMEA and APAC, with a small team split between the UK and India and close coordination with the US, is exactly the kind of cross-border product work that depends on someone who can translate accounting and regulatory detail into a roadmap stakeholders actually act on.

I've led Clearwater Analytics and SimCorp Dimension implementations end to end, from design through production, covering the investment sub-ledger, accounting schemes, and IFRS 9 categorization (ECL, amortized cost, ASD). On the regulatory side, I've worked directly with Solvency II reporting, including SCR, QRT, ORSA, and RSR/SFCR, and with IFRS 17, which gives me the accounting and regulatory grounding this product needs on the EMEA side. I've also run data migrations and interface changeovers between accounting systems, including clearing suspense accounts, building UAT test books, writing CDCs, and constructing journal entries through VBA when systems didn't talk to each other cleanly. That work sits exactly where product managers need to identify gaps and document requirements correctly the first time.

My regulatory depth is French and EMEA-centric (Solvency II, ACPR); I haven't worked APAC-specific regimes directly.

Happy to walk through how this maps to the accounting and regulatory roadmap on a call.
