EY — Financial Services Risk & Actuarial, Leipzig

18 June 2026

EY's Financial Services Risk & Actuarial practice in Leipzig advises insurers on Solvency II, IFRS 17, HGB, and actuarial modeling. That's the core of my career over 25 years. The regulatory and finance delivery layer — IFRS 17/Solvency II target operating model, QRT/SCR reporting, ORSA process design — maps directly to this role.

Relevant track record: Finance stream leader at AXA P&C (2018-2019), covering IFRS 9/17 and Solvency II TOM with dry-run and ORSA workstreams. Interim Head of Financial Production at CNP (2013-2017), where I ran the SimCorp Dimension implementation and fast-close for the investment department, including SII reporting. PMP certified. Qualification actuarielle from the Centre d'Études Actuarielles (2004). Most recently 18 months as Senior Program Manager at Clearwater Analytics, running go-lives for two institutional clients with C-suite governance and live RAID log.

Two gaps to name. First, actuarial modeling: my CEA qualification gives me the conceptual grounding, but Prophet and ResQ are tools I've worked around rather than in. My contribution is on the finance, reporting, and project delivery side of the actuarial-finance interface. Second, German: professionally limited — I can read and write at a working level, but I'm not fluent for complex client conversations.

On seniority: the posting asks for 5 years of experience. I have 25. My rate expectation reflects that.

Available immediately. If the profile makes sense without the actuarial modeling layer, I'm happy to talk.
