Dear Hiring Manager,

I bring 25 years of insurance expertise—the last decade focused specifically on core operations transformation, process redesign, and regulatory compliance across French and pan-European insurers. This isn't consulting theory; it's hands-on experience modernizing the exact functions Deloitte's clients need fixed: underwriting workflows, claims automation, finance close processes, and reporting architectures under regulatory pressure.

My value to your team: I translate technical insurance requirements into workable operating models and implementation roadmaps. I've spent enough time in CFO offices, actuarial departments, and operations teams to know where the real friction lives—and how to move it without breaking what works. I don't generate PowerPoints; I deliver executable solutions.

Two concrete examples: I led the complete redesign of a mid-sized insurer's policy administration and finance close process—cutting month-end close time by 35% and eliminating three redundant control layers. I also managed the regulatory reporting overhaul for a European group transitioning to consolidated Solvency II frameworks, coordinating across actuarial, finance, and IT teams across four countries. Both projects finished on time and within budget, with stakeholder buy-in intact.

One honest reality: I've worked as an independent consultant and interim manager, not in traditional consulting firms. That means I don't carry the Deloitte brand, but I do carry the discipline of delivering outcomes under fixed timelines and complex stakeholder dynamics. I'm looking to bring that operational depth into a senior consulting role where it accelerates client results.

I'm interested in exploring how my insurance operations background strengthens your team's delivery on core transformation mandates. Happy to discuss specific projects that map to your current client needs.

Best regards,

Xavier Robitaille
