Re : Senior External Reporting Manager

Delivering UK statutory accounts under both US GAAP and UK GAAP, on a timetable tight enough to satisfy Audit Committee and Board scrutiny, is where most finance teams lose control of the close. That's the specific problem this role is built to solve.

I've rebuilt investment accounting production under Solvency II constraint at CNP, covering 350 billion euros in assets, and delivered the redesign in 18 months, on schedule, with the reconciliations and controls the auditors needed without rework. On a separate mandate I led the SimCorp Dimension implementation from design through to production cutover, coordinating actuarial, IT and controllership teams so the monthly consolidation didn't slip during the transition. I've also built OD entries via VBA to clear suspense accounts during a GL migration, work that depends on the same UAT discipline and reconciliation rigor this role needs for overseas branch financials and statutory reporting.

Hybrid working is standard practice for me. My last engagement, at Clearwater, ran fully on remote collaboration tools without any loss of pace on deliverables, so working across a Cité de Londres team from a distributed setup isn't a new constraint.

As a contractor who is a non-UK Tax resident, based overseas, IR35 does not apply to me.

Happy to walk through the CNP and SimCorp deliverables in more detail on a call.

Xavier Robitaille
