Re : Business Architect Director, Global Financial Solutions

CSC's Global Financial Solutions unit is rebuilding its operating model from six parallel workstreams into one coherent architecture, with sequencing discipline between data, platform and process as the hard constraint. That kind of integration work, where design decisions in one workstream quietly break another, is where I've spent most of my career.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That meant sequencing data model, platform build and reporting logic correctly from the start, the same dependency chain this role manages across six workstreams instead of one system. At Coface, IFRS 9 rolled out in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, coordination with the custodian CACEIS. I also built the investment Data Warehouse there (fields, table structure, input and output controls), which is the kind of data-architecture work that has to land before platform and automation decisions can be made responsibly. As senior programme director at Clearwater, I ran several parallel R to R SaaS implementations with monthly sponsor committees at executive level and consolidated delivery, milestone and resource tracking on a dedicated tool (Monday.com), including for a Luxembourg client, Luxempart, so cross-stakeholder governance across entities and time zones is familiar ground, not a new discipline to build.

Luxembourg's fund administration and SPV environment adds the multi-entity, multi-jurisdiction layer that makes design coherence hard to hold, which is exactly the standing this role requires with senior workstream owners. The Clearwater programme ran fully distributed across clients and geographies, so hybrid work and remote governance tools are part of how I already operate, not an adjustment.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this sequencing and integration experience applies to the GFS target operating model.

Best regards,

Xavier Robitaille
