Dear Hiring Team,

I'm writing to express my interest in the MOA Consultant – Reinsurance role at Groupe SYD. With 25 years in insurance and finance, including deep experience in business-to-IT translation and complex process automation, I can deliver the cross-functional alignment this transformation requires.

****Why I'm a fit.**** Your mandate—automating Cession & Acceptation workflows while coordinating IT and business stakeholders—sits exactly where I've added the most value. I've piloted similar initiatives: redesigning regulatory reporting flows across multiple business lines, leading PMO governance for enterprise-wide system migrations, and translating actuarial/finance constraints into IT roadmaps. The blend of technical rigor, stakeholder management, and operational discipline this post demands matches my core strength.

****Concrete proof.**** On a recent mission, I owned the end-to-end redesign of a major insurer's financial close process—coordinating four business units, IT, and control functions. We cut cycle time by 35% and eliminated manual handoffs that had created bottlenecks. I also bring reinsurance context: I've worked on capacity planning, treaty automation, and ceding/accepting workflow optimization in previous roles. No PrimaXL experience yet, but I learn systems quickly and the underlying logic is familiar.

****One candid note.**** I'm positioned as freelance/portage rather than traditional CDI. If your mandate is strictly permanent employment, we should clarify that upfront. Otherwise, this arrangement often works well for focused, time-bound transformations.

I'm ready to discuss how to best structure this engagement. You can reach me at +33 6 64 89 09 43 or xro@xavier-robitaille.com.

Best regards,

Xavier Robitaille
