I'm a fit for this mission because I bring what SCC France actually needs: 25 years in finance and insurance transformation, with deep PMO discipline and the ability to hold together complex multi-stakeholder programs under real pressure.

Your 10M€ portfolio across 30 active IA projects requires someone who understands both the technical weight of AI delivery *and* the governance rigor that large groups demand. I've spent the last decade doing exactly this—designing PMO operating models, arbitrating between Build and Run priorities, tracking budgets across transformation initiatives, and making the fuzzy strategic intent into executable quarterly plans. At a major insurance group (2019–2023), I led similar portfolio governance: 15+ concurrent projects, 8M€ budget, weekly decision-making across Finance, Risk, and Operations. The result was on-time delivery and zero budget surprises in a regulatory environment that doesn't forgive slippage.

What sets this apart: I'm comfortable in the gray zone where AI enthusiasm meets operational reality. I can distinguish a viable use case from a proof-of-concept theater, challenge unrealistic timelines without killing momentum, and keep the PMO function tight without becoming bureaucratic. I've built the governance layers (steering committees, working groups, reporting cadence) that let programs at this scale actually breathe.

One honest point: you're looking for a freelancer, and I run my own structure (Expert Zone Advisory SAS, registered in France). That's deliberate—I move faster and stay lean. No corporate overhead, no calendar games. It also means I'm selective about mission length and scope. Your timeline to end-2026 and evolution toward Program Director aligns with what I'm building.

Let's talk. I'm available for a 30-minute call this week.
