I'm a senior business analyst with 25 years in insurance and finance, specializing in the exact workstreams Capco is building around—underwriting transformation, policy administration redesign, and regulatory-driven change programmes.

My last two years have centred on operating model evolution and requirements definition for insurers navigating complex change. At a mid-market P&C carrier, I led the business analysis for a policy administration modernization spanning underwriting, distribution, and claims—translating a fragmented legacy estate into a target-state design that bridged business and technology teams across a 18-month delivery cycle. I documented process-as-is, facilitated 40+ stakeholder workshops, and authored functional specifications that informed technology vendor selection and Agile sprint planning. At a specialist insurer, I managed the business case and requirements for a data-led regulatory reporting rebuild (IFRS 17 and Consumer Duty compliance), aligning Finance, Actuariat, Risk, and Operations around a unified data architecture.

I work comfortably between structured problem-solving and pragmatism—comfortable in both Waterfall governance and Agile sprint cycles. I know the language of insurance (underwriting appetite, loss ratios, policy lapse, reserve adequacy) and I know how to translate that into what technologists need to hear.

I'm based in France and have worked hybrid and remote across European teams for five years. I'm structured enough to manage stakeholder complexity without losing sight of the pragmatic outcome.

I'd welcome a conversation about how I can contribute to your Insurance practice. You can reach me at xro@xavier-robitaille.com or on Calendly to find a time that suits.
