I'm a finance transformation consultant with 25 years in insurance—the last decade focused exactly on what you're building: regulatory reporting infrastructure, operational redesign, and technology-led upgrades in complex financial environments.

What matters here isn't background alone. It's that I've lived the Lloyd's reporting world, led GAAP/IFRS remediations under pressure, and spent the last five years advising insurers on AI integration in finance operations. I know what "challenge existing practices" actually costs and where the real leverage sits—it's rarely where you think it is initially.

Recent example: I rebuilt the finance operating model for a mid-sized (re)insurer facing a three-year regulatory window. We redesigned closing processes, consolidated reporting infrastructure, and embedded controls that reduced month-end from 15 days to 8. That's the kind of delivery—technical rigor plus organizational change—that the transitional phase you're describing requires.

I'll be direct: I've worked as a freelance consultant for the last eight years by design. That's given me real optionality and the chance to pick roles where I can add disproportionate value. This isn't a consolation position; it's a step into a team where I can own infrastructure upgrades long-term and build alongside a department, not just advise from the perimeter.

The Lloyd's market is where I want to deepen roots. I speak the language, I understand the constraints, and I'm interested in staying.

Let's talk quickly—I'm efficient with timelines.
