Re : Business Requirements Lead (Syndicate Reporting) | Specialty Insurance Finance Transformation | London Hybrid | Immediate Start

Defining future-state syndicate reporting while a Finance Transformation Programme is live, and doing it through workshops with Finance, Reporting and Insurance SMEs rather than in isolation, is where this kind of engagement is won or lost. That combination of business requirements leadership and genuine insurance finance depth is the specific gap this role is trying to close.

At CNP, I rebuilt investment accounting production under Solvency II constraints across 350bn€ of assets, running requirement workshops directly with actuarial, finance and IT teams to translate regulatory obligations into functional specifications that technology could actually build against. Delivery landed in 18 months, on schedule. On another mandate, I led a French GAAP to IFRS accounting migration, which meant writing detailed cahiers des charges, running UAT cycles, and clearing legacy suspense accounts before cutover, the same discipline this workstream needs when moving from current-state reporting to automated solutions. I've also worked through SimCorp Dimension and Clearwater implementations end to end, sitting between business SMEs and developers to keep specifications honest and buildable.

Hybrid delivery is standard practice for me. My most recent engagement at Clearwater ran the same 2-3 days on-site rhythm, and I work comfortably across distributed teams and tools.

As a contractor who is a non-UK Tax resident, based overseas, IR35 does not apply to me.

Happy to walk through the CNP and migration work in more detail on a call.
