Dear Hiring Manager,

I bring 25 years of financial services and insurance expertise—and crucially, a track record of building operational capabilities from the ground up. What makes me a fit for Head of AI Operations is not theoretical AI knowledge, but proven ability to translate complex, cross-functional requirements into working systems that deliver measurable outcomes.

I've spent two decades bridging the gap you're looking to close: between technical possibility and operational reality. Most recently, I've led PMO, process redesign, and regulatory compliance initiatives where success depended on aligning Finance, IT, Risk, and Operations around a single roadmap. I know how to establish governance structures that prevent AI pilots from staying pilots. I understand the constraints that operations teams face—regulatory scrutiny, legacy systems, competing priorities—and how to sequence AI adoption accordingly.

Specific example: I redesigned a complex financial closing process that reduced cycle time by 40% while strengthening control frameworks. The win wasn't algorithmic—it was ruthless prioritization, clear role definition across stakeholders, and relentless focus on measurable business outcomes. That's the same discipline you need embedding AI across operations systematically.

I'm currently operating as an independent consultant, which means I move fast and own results directly. The trade-off is obvious: you'd be shifting me from project-based work into a permanent leadership role. I'm ready for that shift. I want to stay in one place long enough to see an AI capability mature from strategy into embedded practice.

I'm based in France, and Copenhagen represents the kind of substantive operational challenge I'm drawn to. I'm ready to move forward quickly if there's mutual interest.

Best regards,

Xavier Robitaille
