Re : Senior Consultant / Manager in Capital Markets & Securities (M/F/X)

BearingPoint's Luxembourg financial services team works at the intersection of capital markets transformation and a regulatory framework that shifts constantly, from CSSF circulars to ESMA guidelines. That combination of custody, asset servicing and lifecycle event complexity, layered with regulatory-driven workstreams, is exactly the kind of mandate I look for.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That mandate combined system implementation, custody-adjacent reporting flows and delivery to senior stakeholders, the same triangle this role sits in.

At Coface, IFRS 9 rolled out in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, and coordination with CACEIS as depository. I also built the investment Data Warehouse from scratch, defining fields, table structure and input/output controls, something directly relevant to front-to-back process work in a regulated environment.

Most recently, as senior programme director at Clearwater, I ran several parallel implementations of a SaaS R to R solution, including for Luxempart, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones and resources on Monday.com. That work was largely remote, coordinating stakeholders across time zones and functions, which is the working mode I expect for this kind of mandate, and one I'm entirely comfortable with.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to your capital markets and securities transformation initiatives.

Best regards,

Xavier Robitaille
