I bring 25 years in insurance and finance transformation—with specific depth in Life & Pensions regulatory delivery, PMO governance, and cross-functional stakeholder alignment. My edge is clarity and execution discipline on complex programmes where compliance, operational redesign, and technology change collide.

I've led end-to-end transformations that match this brief exactly. At Axa, I directed a multi-year Solvency II operating model redesign spanning actuarial, finance, and technology teams—defining requirements, designing target processes, managing governance forums, and tracking benefits realisation across nine business units. At AXA Investment Managers, I ran a regulatory reporting platform migration (UCITS V, AIFMD), coordinating requirements workshops between Compliance, Risk, Operations, and development—translating regulatory drivers into structured delivery artefacts and UAT coordination. Both programmes delivered on time and regulatory deadline.

I work fluently across Waterfall and Agile environments. I'm equally comfortable in strategy workshops defining transformation scope as I am in RAID rooms unblocking delivery friction. I can facilitate with CFOs and actuaries, speak to CIOs about platform strategy, and translate complexity for board audiences. Strong business analysis is my foundation—process mapping, TOM design, requirements documentation—but I've always paired it with programme management rigour: budget tracking, stakeholder communication, governance discipline.

One honest note: I'm currently independent (Expert Zone Advisory SAS). I'm open to permanent roles where the mission and team are strong; I'd want clarity early on whether Capco sees this as a fit structurally.

I'm based in France but flexible on location and would be energised by the London hybrid setup and the scale of Life & Pensions work you're describing. Happy to discuss how my track record maps to your current pipeline.
