Dear Synpulse Hiring Team,

I'm applying for the Senior Consultant role in Core Banking Systems because my 25 years in finance and insurance transformation align directly with what you need: someone who can bridge business complexity, IT delivery, and regulatory constraints without losing sight of the end goal.

My strength isn't theoretical. I've spent two decades moving between PMO governance, business analysis, and interim management roles where the real pressure sits—between Finance, Operations, IT, and Risk teams who don't naturally speak the same language. On a recent regulatory reporting overhaul, I led the design and delivery of a complete process rebuild that reduced closing time by 40% while embedding new control frameworks. On another, I managed the transition of a 200-person finance function through a platform migration that touched everything from GL design to statutory consolidation logic. These weren't consultant-led studies; I owned the execution.

What matters here: I understand how core banking systems actually live in an organization. Not just the technology selection, but how they reshape workflows, data governance, roles, and what people actually do Monday morning. I speak both Avaloq and Temenos environments fluently—not as a credential, but from having optimized and expanded both in production settings where mistakes get noticed fast.

One honest note: I've worked primarily as an interim manager and independent consultant, not in traditional consulting houses. That means I'm wired for accountability and outcome, not project staffing. If Synpulse values consultants who own delivery and push back on oversimplified solutioning, that's where I add the most.

I'm based in France but relocating to Germany is viable for the right role. I'm ready to discuss how to structure this conversation in a way that works for both of us.

Best,

Xavier Robitaille
