

The RPO Company

August 26, 2026

Re : Insurance Digital Transformation Consultant

Insurance operations sit at the center of this role: claims, policy administration, underwriting, back office. The RPO Company's client needs someone who can move between operational teams and IT without losing precision on either side, on programs that touch process redesign, digitalization, and system modernization at once. That combination, insurance depth plus delivery discipline, is where I've spent 25 years in insurance and in finance.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That kind of program requires exactly what this role asks for: gathering requirements from operational teams, translating them into functional specifications, and coordinating IT delivery against fixed milestones.

At Coface, an IFRS 9 program rolled out in stages over four years: successive POCs, ECL methodology, accounting schemes, testing, coordination with the depositary CACEIS. In parallel, I built an investments Data Warehouse from scratch, defining fields, table structures, and input/output controls, the kind of business-to-IT bridge this role calls for. More recently, as senior programme director at Clearwater, I ran several parallel implementations of a SaaS R to R solution, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones, and resources on a dedicated tool (Monday.com), for clients including Luxempart. That work was largely remote, and hybrid delivery, distributed stakeholders, structured cadence, is a mode I'm entirely comfortable running.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to the transformation programs in scope for your client.

Best regards,

Xavier Robitaille
