Re : Integration Project Manager

A global SAP S/4HANA rollout with integration activities spanning multiple workstreams, platforms, countries and system integrators, running through SIT, UAT, cutover and hypercare, is exactly the kind of program where coordination discipline decides whether go-live holds or slips.

My delivery background is built on programs with the same structural risk, even if the platform differs. I've taken over complex transformation programs mid-flight, rebuilding governance, plans of action and issue/dependency tracking to get delivery back under control across Finance, Actuarial, IT, Operations and Risk stakeholders who don't naturally speak the same language. On data and cutover work specifically, I've run migration and interface changeover for accounting systems: writing the cahiers des charges, managing UAT (recette) cycles, clearing suspense accounts post-migration, and building the reconciliation logic (including OD generation via VBA) that catches errors before they surface downstream. I've also led system implementations end to end, from design through production, on SimCorp Dimension and Clearwater Analytics, which means I know what it takes to manage a live application landscape with external vendors and interdependent workstreams.

I have no direct SAP or SAP MDG experience: my system implementation track record sits in investment accounting platforms, not SAP. The delivery discipline transfers; the tool doesn't.

Worth a call to see if that trade-off works for you.
