Re : Finance Transformation Consultant

Optimizing finance transformation for banks and insurers under IFRS 17, IFRS 9, and Solvency II at the same time, while integrating ESG into the reporting layer, is exactly the kind of mandate that tests whether a finance function's controls actually hold under pressure.

At CNP, I rebuilt investment accounting production under Solvency II constraints, covering 350bn€ in assets under management, delivered in 18 months and on schedule. That work required translating regulatory requirements (SCR, ORSA, QRT) into functional specifications the accounting and actuarial teams could actually execute against, which is the same business analysis discipline this role calls for. I've also led data migration and system cutover projects, building UAT test scripts and clearing suspense accounts during GL transitions, work that depends on the same process mapping and stakeholder alignment needed to keep a month-end close on track across finance, actuarial, and IT. On the systems side, I've taken SimCorp Dimension and Clearwater Analytics implementations from design through to production, which means I read regulatory reporting requirements the way an implementation team needs them written, not just the way an auditor does.

My ESG integration work has stayed close to investment reporting rather than covering the full sustainability disclosure stack, so I'd be building on the regulatory side of that more than reusing something already in hand.

Hybrid work has been standard practice for me since my last engagement at Clearwater, remote-first with regular on-site alignment, so a Brussels-based team with cross-border delivery isn't a new rhythm to adjust to. Happy to walk through specifics on a call.
