

As a senior finance consultant with 25 years in insurance and financial services, I bring both the technical depth and operational discipline this role demands. I've spent my career bridging the gap between complex accounting requirements and business delivery—exactly what this Technical Accounting Manager position requires.

My background is grounded in hands-on technical accounting work. I've led regulatory reporting transformation programmes across multiple insurance entities, managed technical accounting assessments for M&A transactions, and supported auditor engagements on high-stakes compliance matters. Most recently, I redesigned a finance operating model for a mid-market insurer that reduced month-end closing cycles by 40% while strengthening technical controls. I've worked extensively with UK GAAP, IFRS transitions, and regulatory change implementation—the core technical areas outlined in your brief.

What sets me apart is the ability to operate across finance functions without losing sight of technical rigour. I work comfortably with FP&A, Tax, and Controllershship teams because I understand their constraints and priorities. I communicate with auditors clearly and prepare documentation that stands up to scrutiny. I also thrive in hybrid, time-pressured environments where visibility and delivery matter more than process theatre.

The 12-month fixed-term structure suits my profile well. I'm positioned as an interim resource rather than a permanent hire, and I bring both the seniority and independence to own high-profile technical work without requiring extensive onboarding or internal politics.

I'm based in France but hold UK work rights and have the flexibility to operate from London on a hybrid basis. I'm ready to discuss how my experience maps to your specific technical priorities—particularly any near-term accounting standard changes or acquisition activity on the horizon.
