Re : Senior Finance Manager - Insurance

Translating IFRS 17, IFRS 9 and Solvency II requirements into working finance operating models is the exact ground this role sits on: leading transformation programmes for insurers under regulatory pressure, with CFOs expecting clear, actionable output rather than theory.

At CNP, I rebuilt investment accounting under Solvency II constraints for a 350 billion euro portfolio, redesigning the sub-ledger and control framework while migrating the general ledger interface. Delivery closed in 18 months, on schedule, with the fast-close process running clean from month one. On another mandate, I led the SimCorp Dimension implementation from design through to production, coordinating finance, risk and IT teams who had never worked from the same data model before, and closing the gap between actuarial inputs and reported figures. I also handled data migration and account clean-up work directly, building the OD constructions in VBA myself when the timeline didn't allow for a separate build team, and running UAT to make sure the numbers reconciled before go-live.

Hybrid work is standard practice for me. My most recent assignment, with Clearwater Analytics, ran almost entirely remote, coordinating distributed teams across time zones without losing delivery discipline.

I haven't worked on CSRD reporting specifically. My regulatory depth is IFRS 17, IFRS 9 and Solvency II.

Happy to walk through any of these in a short call.
