Re : Senior Director, Accounting & Controlling

Building a global accounting engine that scales across regions while cutting manual work through automation is a real transformation brief, not a maintenance role.

At CNP Assurances, I rebuilt the investment accounting production line under Solvency II constraints: 350 billion euros in assets, delivered on time over 18 months, covering IFRS 9 categorization, amortized cost, and ECL methodology. On a separate migration mandate, I designed the data migration and interface cutover between a legacy general ledger and a new accounting system, then built VBA-driven journal entry generation that cleared suspense accounts faster during UAT and go-live. I've also led closing redesigns aimed at fast-close: tightening reconciliation controls and shortening the reporting cycle while keeping audit readiness intact across French GAAP, IFRS, and US GAAP entities. Across these mandates I worked as the connection point between finance, actuarial, IT, and operations teams, the same cross-functional mix this role needs to run a distributed accounting team across multiple international entities.

I haven't worked inside a SaaS or recurring-revenue technology company, and I have no direct NetSuite experience. My systems background is SimCorp Dimension and Clearwater Analytics, on the investment accounting side.

Happy to walk through how this maps onto your accounting operating model on a call.
