I bring 25 years of finance and insurance transformation experience—exactly what you need for large-scale Asset Management projects. My strength is leading complex programs where technical depth, regulatory reality, and delivery discipline intersect. I've designed processes, rebuilt operating models, and kept stakeholder alignment tight under pressure.

Most relevant: I spent the last five years running transformation programs for insurance and wealth management firms—building governance frameworks, leading cross-functional teams through technology-enabled change, and mentoring junior consultants on client strategy. I led a €2M regulatory reporting redesign for a mid-cap insurer, working across Finance, Actuariat, and IT simultaneously. The discipline I bring to program governance, risk mapping, and client communication translates directly to Alternative Investment transformation at your caliber of clients.

I understand the gap: I've been independent and leading my own advisory firm. I'm looking now for the structured leverage, brand, and project scale that a firm like KPMG offers—especially within Asset Management where regulation, tech migration, and operating model complexity are accelerating. The consulting framework at KPMG, your European reach, and the chance to mentor teams of specialists appeal to me more than staying solo.

The practical fit is strong: I speak the language of CFO offices and operations teams. I've navigated Solvency II, EMIR, and comparable regulatory frameworks. I build delivery momentum on day one, not after a ramp period.

I'd welcome a conversation to explore how my background strengthens your Asset Management practice. You can reach me at xro@xavier-robitaille.com or +33 6 64 89 09 43.
