I bring 25 years in insurance and finance transformation—exactly what SimCorp needs to scale its Business Services delivery. My expertise spans the full value chain: regulatory reporting, process redesign, technical architecture decisions, and cross-functional delivery under pressure.

What matters here: derivatives and collateral are mission-critical, high-complexity domains. They require someone who can translate between Finance, Risk, and Engineering without losing the plot. I've spent two decades doing exactly that—closing the gap between business requirement and technical reality, navigating regulatory constraints, and shipping on time.

At Crédit Suisse (2015–2019), I led the PMO for a €40M regulatory reporting transformation across three European entities. I owned the delivery roadmap, coached the architects, aligned the CFO office and compliance teams, and delivered 18 releases with zero regulatory incidents. The business and technical teams actually talked to each other by the end—rare on a programme that size.

More recently, I've spent four years consulting for tier-1 banks on operating model redesign and collateral management workflows. I understand what "horizontal delivery aligned to client outcomes" means in practice: shared accountability, ruthless prioritization, and outcomes that matter to the client's bottom line.

The honest gap: I've been independent for the last five years. I thrive with autonomy and direct client relationships. A senior role on your team works if it's genuinely a leadership position—you want my judgment on strategy and delivery, not just execution. That's where I add the most value.

I'm based in the EU, fluent in English and French, and interested in structured roles where the scope is clear and outcomes are measurable.

Let's talk about what success looks like for your Derivatives/Collateral Value Team.
