Re : Senior Accountant F/M - Insurance - LU878093

Expanding a Finance department under CAA scrutiny while keeping statutory reporting and Solvency II submissions on track is a specific kind of pressure: you need someone who can close books correctly and defend the numbers to regulators and auditors at the same time.

That combination has been the core of my work for the past 25 years, entirely in insurance and finance. At CNP, I rebuilt the investment accounting production under Solvency II constraints, covering 350 billion euros in assets, delivered in 18 months and on time. That work required exactly the kind of coordination this role needs: aligning general accounting, technical provisions and regulatory reporting so the numbers reconcile before they reach the CAA or an external auditor. I've also led migrations and cutover of accounting interfaces, including suspense account clearing and UAT campaigns, which is the kind of process discipline that keeps monthly and quarterly closings clean rather than reconstructed after the fact. My background covers French GAAP, IFRS and Solvency II reporting (SCR, ORSA, QRT), so the regulatory vocabulary and the accounting mechanics behind BEL and technical provisions aren't new territory.

Hybrid work has been my normal setup for years, most recently at Clearwater Analytics, where distributed teams and remote collaboration tools were part of daily delivery, not an adjustment.

Happy to walk through the CNP program in more detail on a call.
