Re : Senior Implementation Manager

Delivering a 12-month systems migration and integration program in a financial environment, with senior stakeholder governance and cross-functional teams to manage, is a delivery mandate, not a maintenance one. That's the kind of brief I've run repeatedly over the last 25 years, always inside insurance and finance.

At CNP, I rebuilt the investment accounting production line under Solvency II constraints: 350bn EUR in assets under management, delivered on time over 18 months, with the sub-ledger and control framework rebuilt from the ground up. On systems, I've taken SimCorp Dimension and Clearwater Analytics implementations from design through to production, working directly with IT, actuarial and finance teams to get the interfaces right before go-live. On migration specifically, I've written the cahiers des charges, run UAT cycles, and cleared out legacy suspense accounts during GL and system cutovers, the exact groundwork a 12-month transformation program depends on to hit its milestones.

The 3 days a week onsite in Dublin is a real gap against how I usually work: my last mandate at Clearwater was run fully distributed, across time zones, using standard collaboration tools without friction. I'm comfortable with hybrid, less so with a fixed weekly relocation.

Worth a call to see if the onsite requirement has flexibility on your side.
