With 25 years in insurance transformation and a decade leading enterprise-scale technology initiatives, I'm well-positioned to drive applied AI adoption across your insurance client base. My work sits at the intersection of technical depth, regulatory complexity, and C-suite stakeholder alignment—exactly where your Director role needs to operate.

I've spent the last five years advising insurers on operating model redesign, digital strategy, and regulatory reporting transformation. This means I understand the constraints: underwriting workflows, claims processes, reinsurance architectures, and the compliance frameworks that shape what's actually implementable. I'm not learning insurance from case studies—I'm building solutions inside it.

Two examples: I led a regulatory reporting redesign for a major P&C carrier that reduced month-end close by 40% and built the business case for a full AI-driven process automation program that secured €2M in board-approved investment. I also advised a group CFO through the people and governance challenges of adopting new analytics platforms across 15 entities—the part where most transformation efforts stall. Both required translating business problems into technical roadmaps and keeping skeptical executives aligned through delivery.

Where I differ from typical AI consultants: I don't position solutions top-down. I spend time with underwriters, claims adjusters, and risk teams to understand where AI actually creates friction relief. I've built enough failed cases to know that adoption isn't a feature—it's a change management problem wearing a technology hat.

One honest point: I've worked primarily as an independent consultant, not as a full-time director within a large delivery organization. If EPAM values someone who can scale thinking across multiple teams and geographies while maintaining hands-on rigor, that's a strength. If the role requires deep org development within your own structure, that's a gap worth discussing.

Let's talk about where applied AI meets insurance reality. You can reach me at xro@xavier-robitaille.com or +33 6 64 89 09 43.
