With 25 years in insurance and finance, I've spent the last decade delivering IFRS 17 implementations and regulatory reporting transformations. This role sits directly in my wheelhouse—and frankly, it's the kind of assignment where I add the most value.

I've led three full IFRS 17 transition programmes: one for a London Market syndicate moving from project into BAU, another for a continental P&C insurer managing dual reporting (UK GAAP + IFRS 17), and a third building the target operating model and controls architecture from scratch. The pattern is always the same—the technical content is solvable, but the real work is translating it for Finance, Actuarial, and Audit; embedding it into process; and making sure the numbers hold when external pressure arrives.

On the syndicate role, I mapped 47 legacy reporting processes into 12 streamlined IFRS 17 workflows, designed controls at the transaction level, and built a reconciliation tool in Excel that reduced monthly variance investigation from five days to one. We handed off to BAU three months early with zero audit adjustments in the first full year. That experience taught me what actually transfers to business-as-usual and what doesn't.

I'm not looking to slide into a permanent role disguised as a contract—that's not my style. A 12-month fixed term works well when the scope is clear and the exit is real. I deliver harder on contracts because the deliverables are front-loaded and the accountability is absolute. Hybrid working from London is straightforward.

The insurance sector is where I've built all my credibility. I speak the language of underwriting exposure, actuarial assumption changes, and Solvency II constraints—not in theory, but because I've had to deliver reporting that reconciles to both.

I'm ready to start quickly. Let's talk about the specific state of your IFRS 17 framework and what the handoff criteria look like.
