Re : Consolidation & Group Reporting Specialist

Producing IFRS consolidated financial statements that shareholders and top management can rely on, while onboarding a senior specialist into BFC and taking ownership of a geographical perimeter within a 6-person team, needs someone who already thinks in consolidation mechanics, not someone learning them on the job.

At CNP, I rebuilt investment accounting production under Solvency II constraints for a 350 billion euro book, moving it from a legacy setup to a controlled process delivered in 18 months, on schedule. That work sat exactly where consolidation output meets audit trail: every entry had to reconcile back to source, because the numbers fed regulatory reporting under scrutiny. I've also run merger and structuring operations end to end, tracking package-to-consolidation flows and securing the final impacts, which maps directly onto the merger and inflows/outflows work described for this role. Separately, I've built and delivered training for local accounting teams on new tools and instructions, the same partner role this position expects toward reporting teams on BFC and closing deliverables.

I haven't worked inside BFC specifically. My consolidation depth comes from IFRS 9, IFRS 17 and Solvency II environments, and from other consolidation packages, so the tool itself would need a short ramp-up.

I currently work as an independent consultant and I'm open to a permanent position at SCOR, whether that starts directly or after an initial period on a freelance basis. Happy to walk through the CNP program in a call.
