As a transformation consultant with 25 years in insurance and financial services, I bring exactly what Otera needs to unlock enterprise adoption: the ability to translate AI agent capabilities into business outcomes that regulated industries actually care about.

I've spent my career at the intersection of complex process design, regulatory compliance, and technology-driven change—the exact terrain where your largest customers operate. Most recently, I've worked as an interim finance manager and PMO lead for major insurers, redesigning operating models and driving adoption of new systems across fragmented organizations. I understand the friction: how actuarial teams resist black boxes, why finance leaders need audit trails, how compliance teams slow every decision. I also understand how to move them.

Here's what matters: I've designed and delivered transformations in closed-loop environments where the cost of failure is measured in millions and regulatory exposure is real. One engagement involved mapping tribal knowledge from 15+ legacy processes into a unified control framework—exactly the pattern recognition and knowledge operationalization Otera's agents solve. I've built trust with C-suite stakeholders in insurance and banking by translating their pain into credible, phased roadmaps rather than overselling AI potential.

The honest gap: I'm currently independent, not employed. That's intentional—it's let me stay sharp across multiple insurers and build patterns rather than getting stuck in one organization. For the right role, I'm ready to go full-time. This opportunity fits: I can step into day-one relationships with enterprise customers because I already speak their language, I understand the regulatory heartbeat, and I know what "transformation that sticks" actually means in banking and insurance.

I'd welcome a conversation about how Otera's vision aligns with what your largest customers actually need to hear and do.
