Re : Project Manager

Property & Casualty transformation programmes live or die on how well underwriting and contract handling teams talk to IT. This role sits directly at that intersection, coordinating business and IT delivery on a P&C programme where execution discipline matters as much as domain knowledge.

I bring 25 years of experience in insurance and in finance, with programme delivery consistently at the center of that work. At Coface, I led the IFRS 9 rollout in stages over four years: successive proof-of-concepts, ECL methodology, accounting schemes, UAT, and coordination with the custodian CACEIS, alongside building an investment Data Warehouse covering field design, table structure, and input/output controls. At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. More recently, as senior programme director at Clearwater, I ran several parallel implementations of a R to R SaaS solution, with monthly sponsor committees at senior management level and consolidated tracking of deliverables, milestones, and resources on a dedicated tool (Monday.com), including for a Luxembourg-based client, Luxempart. That work was fully remote, which is where I do most of my delivery today: hybrid and distributed team coordination is a normal working mode for me, not an adjustment.

The stakeholder coordination this role calls for, business, IT, suppliers, steering committees, matches how I've operated across those programmes. Your client's scale in P&C and the underwriting/contract handling focus is exactly the kind of environment where that combination of technical grounding and delivery discipline adds the most value.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to the underwriting and contract handling scope of your programme.

Best regards,

Xavier Robitaille
