I bring 25 years of finance and operations experience—the last decade focused specifically on fund operations, regulatory reporting, and large-scale infrastructure transformations. I understand the complexity of multi-jurisdictional fund administration, third-party migrations, and the governance demands that come with it.

What matters for this role: I've led similar transitions. At [Insurance Client], I redesigned the entire fund operations function across three jurisdictions while managing a concurrent custodian migration—delivered on time, zero regulatory flags. I'm comfortable with deal structuring coordination, tax documentation workflows, and the detailed financial reporting that keeps auditors and regulators satisfied. I've built the control frameworks and process playbooks that actually stick.

I work best on interim mandates exactly like this one. The assignment has clear scope (12 months, migration focus, operational stabilization), which suits how I operate: diagnose quickly, build structure, drive execution, then transition smoothly to permanent leadership. I don't need to prove myself over 18 months—I deliver visible value in the first 90 days.

The honest part: I'm a consultant, not seeking to embed long-term. That's an advantage here. You need someone who lands running, doesn't get distracted by politics, and treats the fund administrator handoff as the critical success factor it actually is. I'm also UK-regulated (worked out of London twice before) and comfortable navigating FCA frameworks.

I'm ready to move on this. Let's talk through the specific fund vehicles and current pain points—that conversation will tell you what you need to know.
