I'm a senior consultant with 25 years in insurance and finance, and I've spent the last decade advising insurers on exactly what EY's Risk & Actuarial team does: risk modelling, actuarial transformations, and financial controls at scale. What I bring isn't just technical depth—it's the ability to translate between actuaries, finance teams, and IT when those conversations get messy.

I recently led a regulatory reporting redesign for a mid-sized insurer, reducing their closing cycle from 6 weeks to 2 while building their in-house analytics capability. Before that, I managed a three-year IFRS 17 implementation for a larger player, covering everything from reserve modelling to system architecture decisions. Both projects required the exact skill mix your posting describes: quantitative rigour, project discipline, and the judgment to know when a Prophet model needs rework versus when the business assumption was wrong.

I work as a senior independent consultant today, which means I've developed real comfort with standover-the-shoulder delivery and cross-functional complexity. The trade-off is that I'm built for interim and project work, not permanent employment structures—though I'm open to discussing what a Senior Manager role at EY could look like.

What matters to me now is working on problems with real technical substance and a team that values clarity over politics. Your description of the Risk & Actuarial mandate suggests you've got both.

I'm in Hamburg regularly and happy to meet at short notice. You can reach me at xro@xavier-robitaille.com or +33 6 64 89 09 43.
