I bring 25 years in insurance and finance transformation—exactly the operational and regulatory depth your investment funds clients need. I've spent my career at the intersection of business redesign, compliance complexity, and delivery discipline. This is where I add real value.

Over the past five years, I've led similar transformation work. Most relevant: I redesigned the finance operating model for a €8B insurance group, aligning actuarial controls, regulatory reporting (Solvency II), and fund valuation processes across five business units. That project required coordinating compliance, IT, and operations—the same stakeholder dance you need here. I've also supported depositary and fund administration clients on UCITS process optimization and MiFID II governance workflows.

What makes this role compelling: it combines the regulatory architecture I know (UCITS, AIFMD, SFDR frameworks sit in my wheelhouse) with the transformation leadership Resultance builds. I'm comfortable as the trusted advisor to asset managers and service providers—reading their business constraints, translating compliance requirements into operational reality, and pushing teams through change without losing them.

One honest note: I've worked as a senior independent consultant. Resultance is a consultancy with a different model—you build IP, mentorship, and team culture in ways freelance work doesn't. That's actually why this appeals to me. I'm looking to anchor my expertise in a firm where delivery excellence, client relationships, and people development reinforce each other.

I'm based near Paris and ready to work from Strassen. Let's talk about how I can accelerate your investment funds practice.
