Dear Hiring Manager,

I'm applying for the Accountant - Controllership role at Tokio Marine HCC, and I'm a fit because I've spent 25 years building controllership and financial controls frameworks in insurance—exactly what you're establishing.

My last three assignments included designing a full GL reconciliation and close process for a €2B+ reinsurer (reducing cycle time 35%, eliminating month-end exceptions), embedding controls across dual accounting systems during a platform migration, and leading regulatory reporting redesign for Solvency II and Schedule F submissions. I've worked in hybrid teams across London, Paris, and Singapore, and I'm comfortable in the operational detail (reconciliations, substantiation, audit trails) and the stakeholder layer (regulators, internal/external auditors, CFO office).

What matters most here: the Controllership function you're building is foundational. You need someone who sees controls not as bureaucracy but as clarity—someone who can embed rigor without creating friction, and who understands that the General Ledger is your source of truth for every conversation with auditors and regulators. That's my default operating mode.

I'm currently independent (Expert Zone Advisory) and prefer a structured 12-month fixed contract, so there's no misalignment on intent. I can commit to the 3+ days in office without negotiation.

I'd welcome a conversation about how I'd approach the first 90 days. You can reach me at xro@xavier-robitaille.com or +33 6 64 89 09 43.

Best regards,

Xavier Robitaille
