I bring 25 years of experience bridging complex financial technology delivery with operational rigor—exactly what the IOS Value Team needs as it scales derivatives and collateral solutions.

My strength lies in translating intricate regulatory and technical requirements into executable designs. At Generali, I led a €2M+ regulatory reporting transformation where I designed the end-to-end solution architecture, aligned 40+ stakeholders across Finance, IT, and Actuariat, and delivered on-time despite scope complexity. The system handled 15,000+ daily transactions across multiple asset classes. I didn't just consult—I took ownership of the outcome.

More recently, I've spent three years as interim finance transformation lead at institutional clients, managing PMO delivery for operational redesigns where precision and autonomy were non-negotiable. I've worked derivatives and collateral workflows at scale: OTC reconciliation, margin management, regulatory reporting under Dodd-Frank and EMIR. I understand not just the mechanics, but the governance and risk layers that make or break implementations.

Here's the honest part: I'm currently independent through Expert Zone Advisory. I deliver best as a trusted subject-matter expert—not a back-office resource, but someone clients and internal teams call when derivatives and collateral solutions hit real complexity. If SimCorp needs that caliber of ownership and judgment working within your horizontal Value Team model, I'm ready to shift back into a permanent role with the right fit.

Pistoia works. The mandate—driving outcomes for prestigious financial clients while building a people-centered culture—aligns with how I work.

Let's talk.
