Re : Programme Manager - Data & Modelling Controls

Aviva's Data & Modelling Controls programme spans multiple policy administration systems, each with different data structures and control maturity. Building one scalable control environment across that variety, while keeping Finance, Technology, Risk and Audit aligned, is the kind of complexity that needs a programme director who can hold governance and detail at the same time.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That work sat exactly at the handoff point this role targets: data moving from source systems into Finance, with controls that had to hold under audit scrutiny.

At Coface, I built a Data Warehouse for investments, covering field definitions, table structure, and input/output controls, and rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, coordination with the custodian CACEIS. That sequencing, proving a control approach before scaling it across processes, maps directly onto the gap analysis and remediation planning this programme needs.

As senior programme director at Clearwater, I ran several parallel implementations of a SaaS record-to-report solution, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones and resources on Monday.com. Four years at SCOR, two of them as chief transformation officer of the investment function, gave me the same discipline applied to reserving and actuarial data flows, close to the reserving processes this role covers.

Certified in Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026), I now run most of my own consulting work through AI agents under Claude or GPT, which is the kind of practical automation this programme is asking for in discovery and control monitoring.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to the multi-PAS control environment at Aviva.

Best regards,
