I bring 25 years of finance and insurance expertise directly applicable to this Fund Accountant role. My background combines technical accounting depth with operational delivery discipline—exactly what HSBC needs to embed robust controls and manage complex asset class accounting across multiple jurisdictions.

Most recently, I redesigned the operating model and control framework for a €2B insurance portfolio, working alongside audit teams and external technology providers to ensure regulatory compliance and operational efficiency. That experience taught me how to translate accounting requirements into bulletproof processes, maintain stakeholder relationships under pressure, and adapt quickly when market conditions or regulations shift. I've managed similar hybrid delivery constraints in previous roles—split between on-site control work and remote analysis.

I'm currently independent, which means I bring both the focus and flexibility HSBC values in interim placements. I understand fund administration mechanics, investment accounting workflows, and how to communicate technical requirements to both financial and non-financial stakeholders. I'm equally comfortable building relationships with audit firms and external tech teams as I am documenting control design rationale.

The 5-month duration works well with my consulting schedule. I'm ready to start quickly and contribute from day one—no ramp-up time needed.

Let's talk about what you're solving for operationally. You can reach me at +33 6 64 89 09 43 or xro@xavier-robitaille.com.
