Re : Project Manager

Building out a Project Management Service Line for SimCorp Dimension implementations means someone has to own the handoffs, Presales to Onboarding, Onboarding to Run, where projects usually lose time and clarity. That's the part of delivery I've spent most of my career fixing.

At Clearwater Analytics, I managed implementation projects for insurance clients migrating investment accounting from legacy systems onto Clearwater's platform, coordinating data conversion, testing, and client training across distributed teams working fully remote. That setup, hybrid by default, async by necessity, is how I've worked for years now, and it's how I'd expect to work between the SimCorp office and client sites. Earlier, at CNP Assurances, I rebuilt investment accounting production under Solvency II constraints, 350 billion euros in assets, delivered in 18 months, on schedule, with the RAID logs and project artefacts SimCorp expects as standard practice, not an afterthought. Across both, the constant has been translating between IT, actuarial, finance, and risk stakeholders who don't share a vocabulary, then producing a plan the client's CFO and my own delivery team could both act on.

I haven't run a PMI-certified program specifically labeled Presales-to-Run, but PMP-certified since 2025 and the underlying discipline, workstream sequencing, risk mitigation, stakeholder management, is the same muscle.

Happy to walk through the CNP and Clearwater work in more detail if that's useful.
