I bring 25 years of deep finance and insurance expertise—exactly what SimCorp needs to translate complex solutions into measurable client outcomes. As a senior consultant who has spent a quarter-century bridging technical capability with business value, I understand both the product architecture and the stakeholder pressures that drive deal decisions in alternative investments.

My edge is converting technical complexity into clarity. I've led operating model transformations for major insurers, redesigned financial processes under regulatory pressure, and managed large programs where alignment across Finance, Risk, and Operations determined success. This background means I speak the language of CFOs, COOs, and investment officers—the buyers you're targeting. When demonstrating how SimCorp's platform solves real problems in PE, real estate, or hedge fund operations, I won't just describe features. I'll show how the solution reduces month-end close time, improves fund reporting accuracy, or simplifies investor reconciliation in ways that directly impact their P&L and compliance posture.

Concretely: I've advised on post-merger integration for a major insurance group where process clarity alone unlocked €3M in annual savings. I've run proof-of-concept workshops where rigorous scope definition turned skeptical stakeholders into advocates. I know how to listen, ask the right diagnostic questions, and position solutions around what actually matters to the buyer.

The honest gap: I've worked primarily as an interim manager and independent consultant, not in traditional presales. But that's actually an advantage here. I think operationally. I ask hard questions about feasibility. I won't oversell. Clients will trust me because I sound like someone who's actually run these functions, not someone reading a script.

I'm ready to join a team that prioritizes client success and intellectual rigor. Let's talk about how to position SimCorp's value with the precision your market demands.
