Re : Project Manager – Regulatory Projects (Life Insurance)

Life insurance regulatory change at the intersection of Business, Compliance, Risk, Legal, Actuarial and IT is exactly the kind of mandate where delivery discipline matters as much as technical depth. EPSA's positioning on this type of assignment, in Brussels, is what draws me to this role.

My background sits squarely in insurance and in finance, with direct exposure to the Solvency II stack this role requires. At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That work covered the full set of Solvency II deliverables, including ORSA, RSR/SFCR and QRT, and required constant alignment between actuarial, finance and IT stakeholders, which maps directly onto the cross-functional coordination this position calls for.

At Coface, I led a regulatory implementation of comparable scope: IFRS 9 rolled out in stages over four years, with successive POCs, ECL methodology, accounting schemas, UAT, and coordination with the custodian CACEIS. I also built a Data Warehouse for investments there, covering field definitions, table structure, and input and output controls. That mix of regulatory translation, stakeholder management, and hands-on delivery is the same combination this role asks for.

Four years at SCOR, including two as chief transformation officer of the investment function, and earlier reinsurance work across AXA entities and run-off entities, gave me direct exposure to prudential frameworks beyond Solvency II itself. I completed the full examination track of the Centre d'Études Actuarielles in 2004, which gives me a technical grounding that serves me well when regulatory requirements need to become concrete business and IT specifications.

Hybrid work is how I have operated for years, most recently as senior programme director at Clearwater Analytics, running several SaaS R to R implementations in parallel with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones and resources on Monday.com. Remote coordination across distributed stakeholder groups is not new ground for me.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to EPSA's regulatory project pipeline in life insurance.

Best regards,

Xavier Robitaille
