Re : Finance Change Project Manager

Delivering Finance Change that touches actuarial model releases, while keeping governance airtight and budgets under control, is a specific kind of complexity. It asks for someone who can hold technical depth and programme discipline at the same time, across senior stakeholder groups who don't always speak the same language.

Xavier Robitaille holds an actuarial qualification (Centre d'Études Actuarielles, 2004), which means he works directly with actuarial teams on provisioning methodology (IBNR, BEL) and model change rather than acting as a translator between Finance and Actuarial. He has led SimCorp Dimension and Clearwater Analytics implementations end to end, from design through to production, covering investment accounting under IFRS 9 and Solvency II constraints, including data migration, UAT cycles and cahier des charges definition. Governance has always been the operating rhythm, not an afterthought: RAID logs, change control, decision logs, budget tracking, all built to survive audit scrutiny. He's PMP certified (2025), on top of 25 years spent entirely in insurance and finance.

One honest gap: his delivery track record sits on the system and finance side of transformation, not on classic Agile software development lifecycle management. Worth discussing directly rather than glossing over.

Happy to talk through how this maps onto the Finance Change agenda at Standard Life, whenever works for you.

Xavier Robitaille
