Dear EPAM Hiring Team,

I'm applying for Director, Applied AI Transformation – Insurance because my 25-year insurance and finance background gives me the rare combination you need: deep regulatory and operating model knowledge, hands-on experience driving enterprise transformation, and proven ability to translate AI capability into measurable business outcomes for C-suite stakeholders.

For the past decade, I've built transformation programs at the intersection of technology, compliance, and delivery—exactly where insurance AI adoption lives. Most recently, I led a multi-year finance transformation for a Tier-1 insurance group, redesigning processes across underwriting control frameworks, claims operations, and regulatory reporting. I've worked directly with CFOs and Chief Risk Officers on roadmaps that balanced innovation urgency with compliance reality. That work taught me how to shape AI use cases that actually stick: they solve concrete business pain (premium cycle time, claims triage accuracy, reserve validation), they fit the regulatory envelope, and they move from pilot to scale.

I'm equally fluent in the technical side. I've evaluated and implemented multi-agent frameworks and LLM orchestration platforms in insurance contexts—RAG for underwriting documents, agentic workflows for claims workflows, distributed agent patterns across legacy systems. I understand what "production-ready in a regulated environment" really means.

One honest note: I've worked as an independent consultant and director-level interim roles. This is deliberate—I move fastest on high-stakes, short-runway mandates where clarity and execution matter most. Your role is hybrid and multi-location, which suits how I work. If you're looking for someone who embeds themselves in a client problem for 18–36 months and leaves behind a functioning operating model and stronger team, I'm the fit.

Let's talk. I'm at xro@xavier-robitaille.com or +33 6 64 89 09 43.

Best,
Xavier Robitaille
