Re : Program Manager | IT Transformation

Simplifying an IT landscape built around a legacy AS400 core, while keeping an international group's stakeholders aligned from operational teams to Board level, is a specific kind of program: technical enough to demand real governance discipline, political enough to demand real judgment. That combination is where I've spent most of my career.

At CNP, I rebuilt the investment accounting production line under Solvency II constraints: 350 billion euros in assets under management, an 18-month delivery, on time, with the underlying system migration and data conversion running in parallel. That work required the same skill this role calls for: translating a technology roadmap into workstreams that business, IT and regulatory stakeholders could all act on. On other mandates I led SimCorp Dimension and Clearwater Analytics implementations end to end, from cahier des charges through UAT, managing legacy carve-out logic, interface cutover and account cleanup, the same category of complexity as an AS400 carve-out, just in the investment domain rather than the policy administration one. I've also run these programs with direct reports, coaching a project manager while carrying budget, risk and reporting ownership myself.

I haven't managed a policy administration carve-out specifically, my legacy modernization experience sits mostly in investment and finance systems.

Hybrid work has been my normal setup for years, including full remote delivery on my last Clearwater engagement, so a 3-day model in Brussels raises no adjustment issues. Happy to walk through the CNP and Clearwater cases in more detail on a call.
