I bring 25 years of insurance and finance experience—the exact combination this role demands. I've built and scaled application portfolios through transformation cycles, translated strategy into delivery roadmaps, and managed mixed business-IT teams through regulatory and digital change. That's the work here.

Two concrete examples: At a major insurance group, I led portfolio rationalization across 80+ legacy applications during a cloud migration, cutting operational spend by 18% while maintaining SLA compliance across Life products. I owned the Change & Run cadence, synchronized Product Owners with Enterprise Architecture, and ensured every initiative tied directly to business outcomes. Later, I ran financial applications for a €4B+ asset manager through a complete process redesign—orchestrating 12-person cross-functional teams (Ops, Risk, Compliance, IT) to deliver on time, within budget, and regulatorily sound.

What matters here: I don't treat portfolio management as a technical exercise. I own the translation layer. Business strategy → concrete initiatives. IT constraints → realistic delivery plans. Competing priorities → clear trade-offs and decisions. I've lived inside insurance long enough to know Life business drivers, regulatory pressure, and the real gaps between what business asks and what IT can deliver.

One reality: I've worked primarily as a freelance consultant and interim manager. This role is a CDI. I'm actively looking for the right permanent fit—a place where portfolio leadership connects to outcome accountability, and where the complexity of insurance tech transformation justifies the depth of experience I bring.

Let's talk. I'm at xro@xavier-robitaille.com or available on my calendar.
